) DECLARATION OF
RICHARD D. CHAMBERS

Sir:

I, Richard D. Chambers, declare as follows:

1. I am a citizen of the United Kingdom, residing at 5 Aykley Green, Durham, England.
2. As set forth in my *Curriculum Vitae*, submitted as Exhibit 1, I earned a Bachelor of Science (Honours, Class 1) degree in Chemistry in 1956, a Ph.D. in Chemistry in 1959, and a D.Sc. in 1968, all from the University of Durham, England. I held a Postdoctoral Fellowship at the University of British Columbia, Vancouver, from 1959 to 1960, and was thereafter appointed a Lecturer at the University of Durham.
3. I am presently a full Professor of Chemistry at Durham, and was Chairman and Head of the Department of Chemistry from 1983 to 1986. Since 1995, I also have been a Nonexecutive Director of F2 Chemicals, Ltd., a British company specializing in fluorochemicals. I received the American Chemical Society Award for Creative Work in Fluorine Chemistry in 1981. In 1997, I was elected a Fellow of the Royal Society (The United Kingdom Academy of Sciences). I authored the specialist treatise "Fluorine in Organic Chemistry" published by Wiley-Interscience, New York. In addition, I have co-authored numerous peer-reviewed published papers related to organofluorine chemistry.

4. I have reviewed the Schneider applications U.S.S.N. 07/695,343 and 07/775,989 and EP Application Nos. 92810046.0, 90810262.7, 90810367.4 and PCT/EP91/00620 ("Schneider's earlier-filed applications"). Each of Schneider's earlier filed applications discloses a "physiologically acceptable gas being selected from the group consisting of SF₆, . . . CF₄, CBrF₃, C₄F₈, CClF₃, C₂F₆, C₂ClF₅, CBrClF₂, C₂Cl₂F₄, CBr₂F₂ and C₄F₁₀" in the specifications generally, through the disclosure of the use of "physiologically acceptable gases" (e.g., U.S.S.N. 07/695,343, p. 10; EP 90810367.4, p. 10; U.S.S.N. 07/775,989, pp. 1, 15; PCT/EP91/00620, pp. 1, 15; EP 90810262.7, pp. 1, 14), and specifically, through the disclosure of the use of "freon" for its microbubble contrast agents (e.g., U.S.S.N. 07/695,343, p. 10; EP 90810367.4, p. 10; U.S.S.N. 07/775,989, pp. 9, 15; PCT/EP91/00620, pp. 9, 15; EP 90810262.7, pp. 8, 14; EP 92810046.0, p. 17).

5. The term "freon" generally refers to a well-known, well-documented family of fluorinated carbon-containing compounds which includes a "physiologically acceptable gas comprising an organic compound containing one or more carbon atoms and fluorine. Chlorine, bromine and hydrogen atoms may also be present." E.I. DuPont DeNemours and Company, "Freon" Fluorocarbons: Properties And Applications, Freon Product Information, 1987 p. 2. Furthermore, the principal properties of freon include "non-flammability, low toxicity, excellent thermal and chemical stability, high density coupled with low boiling point, low viscosity, and low surface tension." E.I. DuPont DeNemours and Company, "Freon" Fluorocarbons: Properties And Applications, Freon Production Information, 1987, p. 2. Given these disclosures in the specification, as well as the well recognized characteristics and properties of freon, it is clear that freon includes CF₄, CBrF₃, C₄F₈, CClF₃, C₂F₆, C₂ClF₅, CBrClF₂, C₂Cl₂F₄, CBr₂F₂ and C₄F₁₀.

6. It is well established that C₄F₁₀ is a freon. Both CF₄ and C₂F₆ (i.e., CF₃-CF₃) are advertised as freon products. E.g., E.I. DuPont DeNemours and Company, "Freon"

Fluorocarbons: Properties And Applications, Freon Product Information, 1987, p. 2. The presence of both CF_4 and C_2F_6 as freons in a brochure advertising specific freon products for sale supports that other saturated perfluorinated carbon-containing gases such as C_4F_{10} should also be freons. E.I. DuPont DeNemours and Company, "Freon" Fluorocarbons: Properties And Applications, Freon Product Information, 1987, p. 2. The mere absence of a compound from a brochure which advertises some specific freon products for sale does not preclude unadvertised compounds such as C_4F_{10} which meet the proper characteristics and properties from being recognized as freons.

7. Furthermore, it is well established that CBrClF_2 and CBr_2F_2 are freons. As an initial matter, CF_4 , CBrF_3 and CClF_3 are advertised as freon products. E.I. DuPont DeNemours and Company, "Freon" Fluorocarbons: Properties And Applications, Freon Product Information, 1987, p. 2. The presence of gases such CF_4 , CBrF_3 and CClF_3 as freons in a brochure advertising specific freon products for sale supports that gases wherein one or more bromine or chlorine atoms are substituted for fluorine in a saturated perfluorinated carbon-containing gas are also freons. Thus, since CBrClF_2 and CBr_2F_2 each substitute one or more bromine or chlorine atoms for fluorine in the saturated perfluorinated carbon-containing freon gas CF_4 , they too should be considered freons. E.I. DuPont DeNemours and Company, "Freon" Fluorocarbons: Properties And Applications, Freon Product Information, 1987, p. 2. The mere absence of a compound from a brochure which advertises some specific freon products for sale does not preclude unadvertised compounds such as C_4F_{10} , CBrClF_2 and CBr_2F_2 which meet the proper characteristics and properties from being recognized as freons.

8. Additionally, even if some gases such as SF_6 are not freons, Schneider's earlier filed applications still support the disclosure of SF_6 because it recites "physiologically acceptable gases like . . . freon" and SF_6 is a fluorine-containing gas with substantially similar properties to

freon. EP 90810262.7, p. 14; PCT/EP91/00620, p. 15; and EP 9081367.4, p. 10. On another note, SF₆ is specifically supported in EP 92810046.0, p. 12.

All statements made of my own knowledge are true and all statements made on information and belief are believed to be true. I make this declaration understanding that willful false statements and the like are punishable by fine or imprisonment, or both (18 U.S.C. § 1001) and may jeopardize the validity of the patent application or any patent issuing thereon.

Respectfully submitted,

Richard D. Chambers
